Forward Logistics

Reverse Logistics

As a total logistics provider, Bridgeway Logistics incorporates transportation and shipping management as an essential part of our customer service. Our transportation integration enables us to move orders effortlessly from inbound transport, to the carrier, to the customer and then back to us for continuous, complete transportation management. With electronic links to all major carriers, Bridgeway Logistics manages shipping information and controls connections between our carriers and our customers. Based on a customer's delivery preference and geographic location, our system will choose the most efficient and cost-effective carrier. Our transportation team can process multi-carrier rates, routes, bar code tracking labels, and electronic manifests. These services are entirely visible by our customers via our website.

Bridgeway Logistics integrates parcel, LTL and TL shipping operations with inbound and outbound processing to accurately and cost-effectively build, execute, and track shipments in association with carriers, customers, and suppliers. Our single-source capabilities provide direct benefits through improvements to shipping costs, profitability, cycle times, accountability, and customer service satisfaction.

Benefits gained using Bridgeway Logistics' Transportation Integration Services:

- Reduces transportation management time and costs
- Increases profit margins and overall profitability
- Integrates transportation procurement, planning, execution, and payments
- Improves on-time deliveries and customer service
- Enables global supply visibility and maximum efficiency for a more competitive advantage
- Strengthens relationships with suppliers and carriers
- Enables the movement of goods across the country and internationally
